

# MIT's New MA Series: The world's most technically advanced audio interfaces.

The MA, or Maximum Articulation series of cables is the culmination of 30 years of research and engineering by MIT founder, Bruce Brisson.

Brisson's first efforts included many popular interconnects for the Monster Cable company, including Interlink Reference. (Interlink Reference was considered by many to be the first high-end cable.) Additional designs by Brisson for Monster Cable included Powerline 2 and Powerline 3.

Other high-end companies that have used, or are still using Brisson's designs, include Spectral Audio, Inc., Jeff Rowland Design Group, Wilson Audio Specialties, Martin Logan Loudspeakers, Goldmund Audio and Skywalker Sound.

After completing his work for Monster Cable, Brisson formed Music Interface Technologies (MIT) and released the now legendary Shotgun® designs.

 Like 71X the Performance of Just Cable!

Oracle MA interconnects feature upgraded connectors, with 68 and 71 articulation poles/points designed into the single-ended and Balanced (Proline) interconnects, respectively!

Audition the MA System today, only at MIT dealer showrooms.

The Shotgun designs were followed by the first ever Networked Cables. These unique products included the first CVT® and Terminator® technologies.

Today, MIT is proud to announce another major breakthrough in audio interfacing: the Maximum Articulation (MA) Series.

As it was with Interlink Reference, CVT and the Terminator products before it, dollar for dollar, you simply hear more of the music with each MIT MA than "Just Cable".

The Oracle MA Series represents the pinnacle of MIT's Multipole™ technology, engineered with 71 articulation poles/points ensuring the widest bandwidth of articulation.
